PICO Base  
Station 2.5

Runcom  
PICO Base  
Station 2.5

The image shows a piece of electronic equipment, a Runcom PICO Base Station 2.5, housed within a stainless steel enclosure. The device is a white, rectangular unit with a black cylindrical antenna protruding from the top. It is mounted on a metal grate floor. Several black cables are connected to the back of the unit and run along the right side of the enclosure. The walls of the enclosure are made of polished metal panels. A small, clear adhesive label is visible on the upper right panel, and a yellow marker is on the lower left panel. The lighting is somewhat dim, with some reflections on the metal surfaces.
